

Warehouse Solutions

Design Build Perform

Our Optimization Strategy

The SUMMIT process begins with a thorough evaluation of your current operations, focusing on your storage, picking and packing procedures, which leads to a detailed feasibility study. We consider essential factors such as the size and layout of your warehouse, the types of goods you handle, your inventory volume, and your specific storage needs.

We Elevate Precision with CAD Layouts

Using your structural drawings, we carefully measure your warehouse space to identify the optimal areas for equipment placement, ensuring the most efficient use of your available space. We often create CAD layouts that illustrate various options for rack systems, partitions, cages, mezzanines, and modular offices.

Traditional static shelving often results in underutilized space, wasting valuable storage potential.

In contrast, our **modern dynamic shelving solutions**, such as mobile racking and gravity flow racking, transform warehouses by easily adjusting to each item's size and turnover rate.

Our expertise allows us to recommend the best combination of material handling equipment designed to enhance safety and improve profitability within your warehouse. Through our strong partnerships with leading manufacturers of warehouse racking systems and automated storage solutions, we enable you to maximize product turnover and streamline your inventory management.

We also provide crucial support in implementing advanced warehouse management systems (WMS) that efficiently track inventory, direct picking, and manage packing and shipping tasks while seamlessly coordinating material handling equipment.

Summit Handling Systems is proud to be an award-winning dealer of high-quality material handling solutions. We aim to help you minimize human error and repetitive tasks, paving the way for increased efficiency and exceptional productivity in your operations.

Robotics and automation are revolutionizing warehouse optimization. As the demand for efficiency rises and schedules tighten, cutting-edge innovations like Automated Guided Vehicles (AGVs) and advanced robotic picking systems are redefining productivity.

By minimizing labor-intensive tasks, these technologies not only boost accuracy but also elevate operational excellence to new heights. Embracing such advancements is essential for staying ahead in today's fast-paced environment.

Optimize Productivity

We are passionately committed to help you transform your warehouse into a hub of efficiency, productivity, and safety for your employees. Whether you're looking for innovative racking solutions, additional shelving, advanced automation systems, or robust material handling equipment, SUMMIT stands ready to provide seamless, turn-key solutions tailored to your needs. Our solutions will:

- ✓ Enhance material handling coordination
- ✓ Boost inventory control
- ✓ Improve customer service
- ✓ Reduce human error
- ✓ Improve workplace safety
- ✓ Minimize labor

And, empower your business to reach new heights of operational excellence.
